A microSD slot on your phone means you are able to increase your phone's storage with ease. Galaxy S20, S20+, S20 Ultra, Note10+, S10e, S10, S10+, and Note9 support microSD cards up to 1TB, giving these Galaxy smartphones a combined storage capacity over 1TB. To insert a microSD card, first eject the SIM tray by using the ejection pin. Insert the pin into the hole on the SIM tray to eject. Then take out the SIM tray, place your microSD card onto the tray, and put it back into the phone. Discover more about Galaxy for yourself. \*MicroSD card sold separately. Availability may vary depending on country and manufacturer. Page 2 Galaxy S9, Galaxy S9+, and Galaxy Note9 each run on the high-performing 10nm AP (application processor). A nanometer is a billionth of a meter, the 10nm chipset offers better performance and lower power consumption compared to the previous generation chipset generally. Discover more about Galaxy for yourself. Page 3 Much like IP68 for Galaxy smartphones, a rating of 5ATM denotes the level of water pressure it can withstand. Galaxy Watch, Watch Active3, and Watch3 are all rated 5ATM as well as IP68, meaning that they are water resistant and resistant to water pressure at a depth of up to 50 meters. So you can not only wear it safely in the rain or while taking a shower, you can use it to track your workouts while you're swimming. To prevent accidental touches or issues when playing in the water, turn on Water Lock mode. This disables the touchscreen, wake-up gesture feature, and watch always on feature. To activate Water Lock mode, simply select the Swimming exercise option and it will be turned on automatically. Discover more about Galaxy. Page 4 Samsung's flagship Galaxy devices have cameras equipped with 4K UHD resolution capabilities including 4K video recording. And with Galaxy S20, S20+, and S20 Ultra, you can record in an even higher resolution: 8K. It's 4 times bigger than 4K UHD, and allows you to pull high-resolution stills from every frame in your video with 8K Video Snap. Whether you shoot in 4K UHD or 8K, you will capture your surroundings in stunning detail. Discover more about Galaxy for yourself. Page 5 Although Galaxy S20 Ultra features the biggest battery ever on a Galaxy S smartphone, it still needs to be charged. But you don't want to be down for long, so we've made it easier to charge your phone fast. Included in the box with Galaxy S20, S20+, and S20 Ultra is a 25W charger that gives you a day's worth of power with little wait time. Super Fast Charging 2.0 lets you plug your phone into a 45W USB-C charger, hitting 100% in record time on a Galaxy smartphone. All you need is your Galaxy S20 Ultra, its C-to-C cable, and the 45W Travel Adapter, which is a USB-C power adapter that gives you a major boost of power. \*Super Fast Charging 2.0 is only available on Galaxy S20 Ultra and Note10+ with 45W Travel Adapter (PD3.0 standard) and 5A C-to-C Cable, which are sold separately. Use only Samsung-approved battery, charger, and cable specifically designed for your device. Discover more about Galaxy. Page 6 Thanks to the DepthVision Camera, the 3D Scanner app was first introduced on Galaxy Note10+, allowing you to take a 360 degree snapshot of an object and turn it into an animated GIF to send it to your friends. You can add the resulting scan to photos, or add the 3D scan to a video where it will follow your friend's movements! To use 3D Scanner, you will need to download the app. There are two ways to download it: you can find it through the Galaxy Store by searching for 3D Scanner, or go into the Camera app, select More on the bottom right and then AR Zone at the top of the screen. There you will see the 3D Scanner icon with a download button. Once it's installed, it's time to get started with your 3D scanning phone. \*Available on Galaxy Note10+, S20+ and S20 Ultra. \*\*Accuracy of 3D Scanner may differ depending on shooting conditions including subject shape, size, symmetry, color, transparency, thin objects or black objects. Discover more about Galaxy. Page 7 The DepthVision Camera is a Time of Flight (ToF) camera on newer Galaxy phones including Galaxy S20+ and S20 Ultra that can judge depth and distance to take your photography to new levels. It uses the known speed of light to measure distance, effectively counting the amount of time it takes for a reflected beam of light to return to the camera sensor. This smartphone ToF Camera is used with Live focus video and Quick Measure, letting you add more creative flair and get information in a way you've never seen before. In the case of Live focus video, you're now able to blur out the background in real time as you take a video, adding a brand new vibe to your movies. You can even swap between foreground and background focus with ease, to switch up the focus with a tap. Live focus video is available on both the front and rear cameras, so simply open the Camera app and swipe to Live focus video to try your hand at movie direction. With Quick Measure, the camera acts as a 3D camera, judging width, height, area, volume, and more when you put an object in frame. Quick Measure is a preloaded app, so open it up and put an object in focus to get a real-time measurement right on your screen. \*The DepthVision Camera on Galaxy Note10+ has VGA resolution, Galaxy S20+, S20 Ultra, and S10 5G do not. \*The Quick Measure app is separate from the Camera app. \*Any measurements provided by Quick Measure may not be accurate and should be used for reference purposes only. Accuracy of Quick Measure may differ depending on various factors including shooting conditions, such as being outdoors, and object characteristics, such as being too large, very small, highly reflective, or extremely dark. \*Quick Measure on Galaxy S20 without the DepthVision Camera provides only measurements such as distance, length, and human height. Quick Measure on Galaxy S20+ and S20 Ultra with the DepthVision Camera provides additional functions including Area measurement and 3D measurement. Discover more about Galaxy. Page 8 With the launch of Galaxy S20, S20+, and S20 Ultra, video recording on Galaxy phones reached a new level — 8K. Measuring 7680x4320 pixels, 8K is about 4x the resolution of 4K UHD and is now the highest resolution available on a smartphone. Imagine shooting video with incredible clarity never seen before on a Galaxy device — the amount of detail captured in your 8K videos can make your viewers feel as if they were right there with you. And with 8K video comes 8K Video Snap, which allows you to pull a 33MP still from your 8K video — because every frame of an 8K video is high resolution. Discover more about Galaxy. \*8K recording is available on the rear camera of Galaxy S20, S20+, and S20 Ultra. Page 9 The next generation of data speed is 5G, offering blazing fast connections even when you're not connected to Wi-Fi. Download even large files quickly and enjoy streaming or gaming with little lag. The first 5G-capable smartphone was the Galaxy S10 5G, now Galaxy Note10, Note10+, Fold, S20, S20+, and S20 Ultra are all available in 5G versions. Meaning if your mobile carrier is offering 5G speeds, you can take advantage. If your area isn't 5G-ready yet, you can still enjoy the latest Galaxy smartphone by picking up a Galaxy Note10 or Note10+ LTE edition. 5G availability may be different from country to country or depending on your carrier, but more countries with 5G support will be coming in the future. \*Galaxy Note10 5G, Galaxy Note10+ 5G, Galaxy S20 5G, Galaxy S20+ 5G, and Galaxy S20 Ultra 5G model availability may vary depending on country or carrier. Actual connection speed may vary depending on country, carrier, and user environment. \* Requires optimal 5G connection. Actual speed may vary depending on country, carrier, and user environment. Discover more about Galaxy. Page 10 5G is a new data standard that will surpass the speeds of 4G LTE, with a hyper-fast, low latency connection. Theoretically, at its maximum fastest speed, 5G will be around 100 times faster than current 4G speeds, allowing you to download, upload, and stream at incredible speeds without being connected to Wi-Fi. It also will reduce latency, for improved responsiveness and less lag when you're connected. Samsung Galaxy S20, S20+, and S20 Ultra all offer 5G connection capabilities on their 5G models, allowing you to connect to a 5G network and harness the HyperFast speeds. Mobile carriers around the world are rolling out 5G connections, so as long as you have a 5G compatible phone, you'll soon be able to take advantage of a next-generation network. \*Galaxy S10 5G, Galaxy Fold 5G, Galaxy Note10 5G, Galaxy Note10+ 5G, Galaxy S20 5G, Galaxy S20+ 5G, and Galaxy S20 Ultra 5G model availability may vary depending on country or carrier. Measuring 7680x4320 pixels, 8K is about 4x the resolution of 4K UHD and is now the highest resolution available on a smartphone. And because of the significant pixel boost, you can pull high resolution stills from your 8K video. Each frame of an 8K video is a 33MP still, and 8K Video Snap allows you to scrub the timeline of your video, find the right moment, and snap the frame. You can get creative with funny coincidences or memorialize a special moment as a photograph to print out in high resolution. To use 8K Video Snap, capture an 8K video or select one you've already captured from your Gallery. Go forward and backwards throughout the video to find the moment you want to turn into a still. Once you've chosen, tap the 8K Video Snap icon in the corner to capture. Discover more about Galaxy. \*8K recording is available on the rear camera of Galaxy S20, S20+, and S20 Ultra.
