Abbreviations: DT-PACE, dexamethasone/thalidomide/cisplatin/oxycarbonyl/cyclophosphamide/etoposide; VTD-PACE, bortezomib (VTD-PACE) ± high-dose cyclophosphamide; DT-PACE, dexamethasone/thalidomide/cisplatin/oxycarbonyl/cyclophosphamide/etoposide; VTD-PACE, bortezomib (VTD-PACE) ± high-dose cyclophosphamide.

1. Selected, but not inclusive of all regimens.  
2. Regimen under investigation for patients treated with proteasome inhibitors or daratumumab.  
3. Subcutaneous bortezomib is the preferred method of administration.  
4. Full-dose bortezomib is recommended with immunomodulatory-based therapy. Therapeutic anticoagulation is recommended for those at high risk for thrombosis.  
5. Can potentially cause cardiac and pulmonary toxicity, especially in elderly patients.  
6. Higher regimens should be used as the standard therapy for patients with multiple myeloma, however, elderly or frail patients may be treated with doublet regimens.  
7. Consideration for appropriate regimen is based on the context of clinical relapse.  
8. Carcinoma with these regimens primarily involved patients who were lenalidomide-naïve or with lenalidomide-sensitive multiple myeloma.  
9. May interfere with serological testing and cause false-positive indirect Coombs test (See MYEL-4).  
10. Generally reserved for the treatment of aggressive multiple myeloma.
