

The best video recording app for android

Continue

What is the best video recorder for android. The best hd video recording app for android. What's the best recording app for android. Which is the best video recording app.

There are times when you need to upload a video on Android. Fortunately, Android smartphones today are equipped with amazing cameras that allow you to record videos in amazing quality. But what if you want to take your Android video recording functionality to the next level? You need a third-party video recording app for your Android phone. But wait, don't be mistaken! You don't need to use video recording apps from Play Store to record videos. But yes, if you do, it will be great. Standard video recording applications usually do not offer advanced functions. More or less, your only option is to record videos (and switch modes) from the stock Android video recording app. And if you need more control (and options) for shooting video, the camera app doesn't offer it. And that's why you should use the best video recording apps for Android that we've listed here. Top 10 Video Recording Apps for Android In this article, we have selected some tested options (apps available on the Play Store) for your Android device. Dive in! 1. Camera MX (Free) Camera MX is one of the best camera apps for Android. Whether you're taking photos or filming, this will come in handy. You can record videos in slow motion and also have a history of your shots, so you can rewind a few moments of the frame to get the perfect shot. It also offers live filter options to apply filters while recording. You can crop/trim the recorded video and edit it a bit before sharing. 2. FILMIC Pro: Handheld professional HD video camera (paid). However, unlike Camera MX, it is not available for free. This is a fully premium app requiring almost \$13 upfront. I wouldn't recommend you try this as a first alternative, but if there are times when you need to record a video on Android. Fortunately, today's Android smartphones are equipped with amazing cameras that allow you to record amazing quality videos. But what if you want to take Android video recording to the next level? You need a third party video recording app for your Android phone. But wait, don't get me wrong! You don't have to use the video recording apps from the Play Store to record videos. But yes, if you do, it will be great. Because video recording apps usually don't offer extensive features. More or less, your only option is to record videos (and switch modes) from an Android video recording app. And if you want more control (and power) over video capture, the stock camera app doesn't offer that. And that is why you should use the best video recording apps for Android that we have listed here. Top 10 Video Recording Apps for Android In this article, we have selected a few tested options (apps available on the Play Store) for your Android device. Let's dive in! 1. Camera MX (Free) Camera MX is one of the best camera apps for Android. If you are taking photos or videos, this will come in handy. It allows you to record video in slow motion while keeping the history of your snapshots, allowing you to rewind a few moments from the recording and capture the perfect shot. It also includes live filter options for applying filters while taking photos. You can trim/trim the recorded video and edit it a bit before sending. 2. FILMIC Pro: Handheld Professional HD Camcorder (Paid). However, unlike Camera MX, it is not available for free. This is a premium only app requiring almost \$13 upfront. I wouldn't recommend you try this as a first alternative, but if you'll want to try something that supports 4K video recording with advanced manual controls designed for you. It's good that the developer is constantly updating the app to fix issues or add new features. So worth checking out. The user interface may be similar to the Google Camera app. However, the Footej Camera app for Android devices offers more options. You'll notice manual controls such as setting ISO, saving a RAW file, options for changing shutter speed, and adjusting focus. These options will help you record higher quality professional video directly from your Android smartphone. Of course, if your hardware supports it, the file will also be saved in RAW format. In addition, it also has GIF support (which can be useful) and allows you to record slow motion videos. 4. Google Camera (Free) Now that I mentioned Google Camera, I have no hesitation in recommending it as one of the best video recording apps for Android. Yes, it's technically the default camera app on multiple devices (especially the Google Pixel series). However, it provides some exclusive features that no other camera app can achieve. The best performance of companies and HDR+ applications in general makes it one of the most compelling video recording applications. 5. Cinema FV-5 (Paid) Looking for a premium camera app that gives you hands-on control over video recording, but at a low price? This is the only reason I mention the Cinema FV-5. It's only about 2 dollars. Like my previous advice, I recommend trying paid solutions only after checking out free solutions. You don't want to spend money on useless apps... do you? In other words, it's not a bad app. But depending on what you need, there might be something that works better than this, so always make it a habit to try out the free things available before you decide to pay for a service. 6. Moving Frames (Free) - Part of Google's experimental program.Motion Still might not be exactly the camera app that can be used to record videos on Android. But it lets you record a short video and helps you convert (and share) it as a GIF. So if you want to record videos to make GIFs, this should be your favorite app. 7. Open Camera (Free) Open Camera is a fairly popular camera app for Android, which is also an open source app. Unlike other camera apps, it has no ads or in-app purchases. This is a very simple camera app that allows you to take photos and videos with advanced features. It has some manual controls that you need to adjust in order to capture the best video or photo. If you prefer a third-party app that isn't too Bushy or ad-free to record your videos, Open Camera is a good alternative. 8. Moment Pro Camera (paid) Moment Pro Camera is an interesting premium camera app that tries to offer some unique features to enhance your photo or video capture. If you also have an iPhone, you will find the Moment Pro Camera iOS app to be better. However, the development team is constantly releasing updates to fix all issues and make it more convenient for most users. In addition to some unique features, you also get a full set of manual controls for taking photos and videos. So I suggest you check it out. 9. Camera with manual control (for a fee). If you run out of options and want to manually manage your photos and videos, this might be an alternative. Personally, I would avoid an app that hasn't been updated in over two years. However, you still see a few users who will use the app. So, as a last resort, you can try this for video recording. 10. Simple Camera. If you think your default camera app is bloated then Simple Camera is for you. This is a simple camera app with no in-app ads. As you may have noticed, it doesn't have many features, it just offers a camera app without permission to take photos and videos. Conclusion Personally, I find the standard (default) camera app to be sufficient for my needs. However, if you like manual controls, live effects, and other nifty features that can help you stand out with your videos, the above apps are worth checking out. There are free alternatives, but you can also try the paid ones to see what you can do with them. Which camera app do you use to record video on Android? Let us know your thoughts in the comments below. Related Resources: These days our Android phones can do almost anything with the right app. But when you're trying to find the best video recorder app for Android, the Google Play Store can be overwhelming. There are many video apps to choose from. Some have ads, some cost money, some are free but require a pro upgrade to access most features, and some are just plain awful. That's why we took some time to scour the app store to find our favorite video recording apps to save you time and frustration when creating video marketing content. We've put a few apps into each of the three categories: Camera apps Screen recorders Video editors Let's start with the basic camera apps. But first, a word of warning: most Android phones come with a default camera app already installed. Most of the time, this camera app is more than enough to record great quality videos on your phone. Sometimes it's even better than the third-party camera apps you'll find on the Play Store. We recommend starting with the default camera app and then switching to another app if you don't like it or need more functionality. The first app on our list, Camera MX, has some special features that most default camera apps don't. Camera app for Android Camera MX Camera MX is one of the few third-party camera apps we've tested that gave us new features that we couldn't see how we use The app is free and ad-free, but in-app purchases are available. Camera MX includes basic camera settings such as video quality, flash, exposure, and aspect ratio. However, some of the extra features available in the manual modes of some camera apps are missing, such as manual focus, ISO settings, and white balance adjustments. Camera MX distinguishes two unique features: filters and what it calls "Live Shot". The filters that come free with the app offer great ways to make your videos stand out on social media. You can do things like add borders around the video or make the entire video black and white except for one color as shown in this gif. Live Shot is technically the camera's MX photo mode. But it actually makes a very short video (just under three seconds). You can then save that Live Shot "photo" as a GIF or video from your gallery. The only tricky thing is that it records a few seconds before you press the button to take a video, not a few seconds after. For this reason, and because a gif is so short, it's best to use it to capture something that's already in motion. You can also use it to take a "photo" that has some movement. For example, you might have a photo of a stationary person with trees gently swaying in the wind behind them. Open Camera Open Camera is a great alternative to the camera app on your phone. It provides a wide range of features (especially if your phone supports Camera2 and you activate the "Use Camera2 API" setting when you open the camera). Surprisingly, Open Camera is free on the Google Play Store, requires no in-app purchases, and contains no ads - a very rare and great combination for third-party mobile apps. The app gives you full access to almost all camera features that can be controlled on your phone. This includes flash settings, ISO, focus modes, manual focus with Camera2 API, resolution, white balance, color effects and exposure. In addition to these basic features, it includes a few that might not be in your stock camera app. One of our favorites is the on-screen information overlay, which you can customize to show your device's available remaining storage space, battery level, camera angle, ISO, and more. A wide range of grid overlays can also go a long way in creating the best shot. This app is probably not the best choice for people who just want to point and shoot. It's pretty easy to get lost in the settings if you're not sure what you're doing. However, you can set everything to automatic if you prefer. HD Camera for Android HD Camera for Android is another highly rated third party camera app. It has a much cleaner and simpler user interface (UI) than Open Camera, but it doesn't give you as many settings. It's also free, but it's ad-supported, which can be a bit annoying. That being said, if you want an easy-to-use, basic camera, the app is great. It allows you to set white balance, video quality, and flash, but only allows you to use autofocus in video mode. In some cases this can cause problems. The HD camera has some unique features that can be useful. First, you can go to your photo and video gallery by just swiping right, so you can easily see the images you've already taken. You can also tap the screen during the video to take a picture, which can be a lot easier than trying to capture a frame from the video for a still image later. Finally, as with Camera MX, there is the option to create time-lapse recordings. Android Screen Recorder DU Recorder We were impressed by how well this free screen recorder works and how many features it has without annoying ads or in-app purchase requirements. As with all screen recording apps, the main purpose of this app is to capture videos of what is happening on your phone. But DU Recorder goes much further. A First, it offers a wide variety of screen capture options. By changing the settings, you can choose to have the app mirror your touches on the screen, record sound during screen recording, display the front or rear camera in an adjustable frame on the screen, and add images during recording. After you finish recording, the app also allows you to add subtitles, crop the video, and save the video as a GIF. But it is better. What surprised us the most about DU Recorder is the built-in tools, all of which can be used with screenshots and videos captured with the app, or regular media files stored on your phone. With these tools, you can edit videos, merge videos, transfer files over Wi-Fi, merge images, blur images, and crop images. While you can - and should - download DU Recorder for its screen recording capabilities, don't be surprised if you find yourself using it to work with other photos and videos you capture with your phone. AZ Screen Recorder AZ Screen Recorder is a highly regarded alternative to DU Recorder. It's also free but contains discreet ads and in-app purchases. The app is very easy to use and offers features like showing taps on the screen, adding overlay text or logos and recording sound. However, to get more advanced features, you need to upgrade to the Pro version for \$2.99. In the professional version you can also edit your recordings, view the front or rear camera and save files as GIFs. Video Editors for Android VideoShow VideoShow offers an easy way to capture and edit photos and videos on your phone. The app is free and ad-free, but some features require in-app purchases. In VideoShow you can take new videos and photos or choose the ones you have saved on your phone. From there you can trim clips, adjust their speed, flip them, add transitions, apply filters, draw on them, and add special effects. You can also use ready-made music and save video as GIF. The app has a watermark on the video, but you can remove it by purchasing the professional version. The Pro version will also add more filters, effects and themes. Quik Quik does not allow you to record videos in the app, but it does make video editing very easy. It is also one of the best apps for combining photos into interesting slideshows. Best of all, the app is free and doesn't overwhelm you with ads. The application has several video templates. Just select the photos and videos you want to use (the app uploads media from your phone, Facebook, Google Photos, and even GoPro), choose a template, and Quik does the rest. Each template includes transitions and music. It even syncs video "highlights" (which you can choose from) and music transitions. Quik doesn't allow for a lot of customization, but you can tweak a few settings in each template and choose from the many tracks in the app, or upload your own. Quik is best suited for people who want to merge multiple videos and photos very quickly, and for those with no editing skills. Conclusion Although there are many video recording apps for Android, we found that these seven are the highest. Use any of them and you'll be creating high quality videos quickly and easily - be careful, Hollywood! Do you have a favorite Android video app that we missed? Tell us about it in the comments! notes!
