Thanks to everyone who shared feature requests, ideas, issues, comments, and kind words. The list of participants is at the authors' address. GitHub . { # Загрыянъ CSS and JavaScript #} { % Bootstrap_css %} { % bootstrap_javascript %} { # oroBeltaks = "super"%} {%bootstrap buttototototototototototototototototototon = "cancel"%} { # see documentation for more information # BootStrap5 setting for more information for more information. , see "Settings". The demo application contains a number of useful examples. zostera/django-boost Rap5/tree/main/example © Copyright 2022 by Dylan Verheul. Modified and A6Fe1Fe4. Formed using the sphinx usingBootstrap 4 integration for Django. The aim of this project is to smoothly combine Django and Bootstrap 4. Requirements for Python 3.6 or later with Django> = 2.2 or later. Documentation can be found throughout the documentation at . Install installation using PIP: PIP Install Django - Bootstrap4 or you can install download or clone this repurchase and summon PIP install -e .. add to install_apps your settings.py: install_apps = (# ... "bootstrap4", # ... ... "> { % CSRF_TOKEN %} { % bootstrap_form forms The program is available in the demonstration version. You can run it from your virtuealenv using python manage.py runserver.The medium and suggestions you have found an error or have an additional feature request, use a github https: // github .com/zostera/django-bootstrap4/django Issues License you can use to use C BSD-3. For more information can be found in the license file. The author has created and overseen Zostera. Original author: Dylan Verheul. Thank you to everyone who shared mining requests, ideas, problems, comments and beautiful words. You will find a list of yves at AUTHORS.MD. GITHUB After installing you can use Django-bootstrap5 in your templates # Upload CSS and javascript #} { %bootstrap_cs %} { %bootstrap_javascrip %} {#display form #} > New row Add some boot style meta lengths. We keep the same name that automatically gets CSS style. Bootstrap JavaScript for additional features. We will not use them in this lesson because We just wanted to show you how to use CDN so you could see what you want to add to the model after you post it in bootstrap content documents. Refresh the page to http: // Localhost: 8000 and you should see "Hello, the world!" Replace the fonts. If you see, everything works as expected. What to do? We just included bootstrap using CDN to use it in a Django template. C was the easiest way to start Django's leaf and now you can do much more. Then try some of these other related Django guides: do you have any questions? Contact me on Twitter @FullStackpython or @Mattmakai. I also use the GitHub username to Matmaka. If you have any problems or see errors in this training program pleaseSubmit a pull request with source repository and hotfix on GitHub. exchange.
