Accounts Payable

LOST RECEIPT FORM

I hereby certify that the original receipt was lost, accidentally destroyed or unobtainable and that the information detailed below is complete and accurate.

Receipt Information:

Date of Receipt: _____

Total Amount of Receipt (including taxes): $_____

Vendor Name: _____

Description of Goods and/or Services:

Reason Receipt Was Lost: _____

Alcohol Charges:

Yes No

If a "lost" meal receipt, does the receipt cover more than one individual? If so, please note individual name(s) and business purpose:

_____

_____ _____

Claimant Signature *Claimant Name*

_____

Date

Please attach this form to your Travel Expense Form

Submit Form To: Senior Clerk Accounts Payable - Rob Dobson (rdobson@uwindsor.ca)
If there are any questions while filling out the form, please contact Rob at ext. 2120

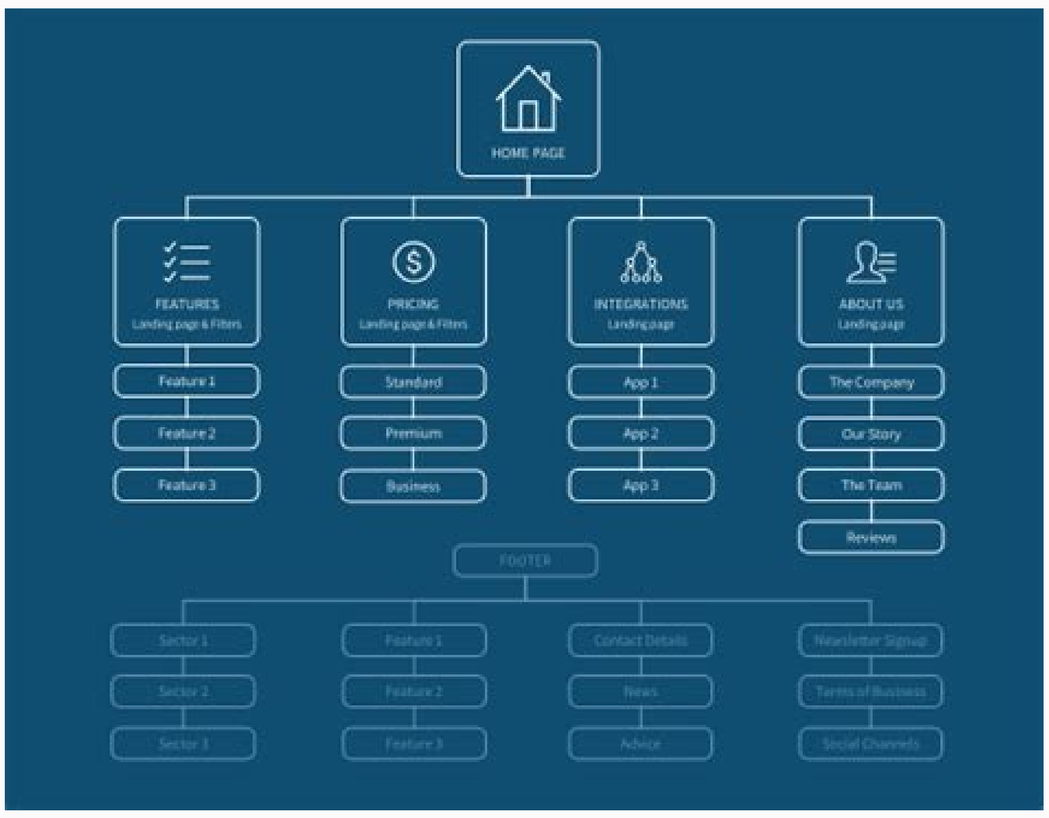
August 4, 2014



The legal characters and the names of months and days of the week are not case sensitive. on a specific date or at fixed time intervals. E.g.: "15-17" in the day field indicates the days 15, 16, and 17. If the 12th is a Sunday, the trigger will fire on Monday the 13th. The fields are as follows:: So cron expressions can be as simple as this: * * * * ? Similarly if you gave "15/30" then the selection are the minutes 15, 45, 75, and 105. Other examples: "1#2" = the second Sunday of the month and "3#4" = the fourth Tuesday of the month. Cron is the name of program that enables unix users to execute commands or scripts (groups of commands) automatically at a specified time/date. A Web server is a daemon, it stays dormant until it gets asked for a web page. Special characterDescription * ("all values") Used for selecting all values within a field. L("last") Specifies different meaning in each of the two fields in which it is included. '2/5' in the day-of-month field means "fire every 5 days starting on the second day of the month". crontab -e Edit your crontab file, or create one if it doesn't already exist. E.g.: "9,10,11" in the hour field indicates the 9th, 10th and 11th hours in a day. A common use for it today is connecting to the internet and downloading your email. crontab -r Remove your crontab file. So if the 12th is a Saturday, the trigger will fire on Friday the 11th. W ("weekday") Specifies the weekday (Monday-Friday) nearest to the given day. What is a Cron Expression? E.g.: The value "L" in the day-of-month field means "the last day of the month" - day 31 for January, day 28 for February on non-leap years. The following are few crontab options. E.g.: "*" in the hour field indicates "every hour" ? Invalid Cron Expression Cron expression should have 5 parts Reset Input *any value ,value list seperator -range values /step values 0-59allowed values *any value ,value list seperator -range values /step values 0-23allowed values *any value ,value list seperator -range values /step values Lthe last day of the month Wthe nearest weekday LWthe nearest last weekday ?no specific value 1-31allowed values *any value ,value list seperator -range values /step values 1-12allowed values JAN-DECallowed values *any value ,value list seperator -range values /step values Lsaturday #n'th day ?no specific value 0-6allowed values SUN-SATallowed values You can check the cron format, know the allowed characters and even refer few examples to get an idea about cron expressions. Note that if you specify "#5" and there is no 5 of the given day-of-week in the month, then no firing will occur that month. Cron is a daemon, which means that it only needs to be started once, and will lay dormant until it is required. month1-12This is the month a specified command will run on. However if you define "1W" as the value for day-of-month, and the 1st is a Saturday, the trigger will fire on Monday the 3rd, as it will not 'jump' over the boundary of a month's days. E.g.: If you define "12W" as the value for the day-of-month field, the meaning is: "the nearest weekday to the 12th of the month". weekday0-6This is the Day of Week that you want a command to be run on. If used in the day-of-week field alone, it simply means "7" or "SAT". Cron is typically used for scheduling repetitive tasks such as performing system maintenance, downloading emails etc. userrootThis is the user who runs the command. / L # The 'L' and 'W' characters can also be combined in the day-of-month field to yield 'LW', which translates to *"last weekday of the month"*. E.g.: The value of "5#2" in the day-of-week field means "the second Thursday of the month" (day 5 = Thursday and "#2" = the 2nd one in the month). If the 12th is a Wednesday, then it will fire on Wednesday the 12th. hour0-23This controls what hour the command will run on. crontab -l Display your crontab file. JAN,MAR,SEP MON-FRI Field NameMandatoryAllowed ValuesAllowed Special Chars MinutesYes0-59, - * / HoursYes0-23, - * / Day of monthYes1-31, - * ? You can also define an offset from the last day of the month, such as "L-5" which would mean the fifth-to-last day of the calendar month. day1-31This is the Day of Month, that you want the command run on. Cron or cron job is a standard Unix utility that is used to execute scheduled commands or scripts. You can also include '/' after the '' character - in this case '' which is equivalent to having '0' before the '/'. But if used in the day-of-week field after another value, it means "the last xxx day of the month" - for example "3L" means "the last Tuesday of the month". It is normally used for sys admin commands, like makewhatis, which builds a search database for the man -k command, or for running a backup script, but can be used for anything. MON is the same as mon. - Specifies ranges. command/cmdA valid shell syntax code, executables or combinations of both If you want to run cron every minute, hour, day, month, weekday then please include [*] in all value field. How to start Cron? / Indicates increments. minute(s) hour(s) day(s) month(s) weekday(s) command(s) CategoryValueDescription minute0-59This controls what minute of the hour the command will run on. know more This tool helps you to generate custom cron expressions for scheduling tasks such as backups, emails, and status checks. # Specifies "the nth" XXX day of the month. or more complex, like this: 14,18,3-39,52 * ? The cron daemon, or crond, stays dormant until a time specified in one of the config files, or crontabs. When using the 'L' option, it is important not to specify ranges of values, as the results generated can be confusing or unexpected in nature. E.g.: If "0/30" is given in the minutes field, it indicates you selected the minutes 0, 30, 60, and 90. A cron expression is a string comprised of 5 different fields separated by white space. / L W Month(s)Yes1-12 or JAN-DEC, - * / Day of weekYes1-7 or SUN-SAT, - * ? ("no specific value") Used to select something specific in one field while generating something random in the second field.E.g.: If you want the trigger to fire on the 15th day of a month but don't care about what hour of the day it is, then you can specify the two fields as "15" in the day field and "?" in the hour field. Each field can comprise any of the allowed values, along with different variations of the allowed special characters for that field. , Used for indicating additional values. Please note that the 'W' character can only be specified when the day-of-month is a single day, not a range or list of days.
