Well, you can first expect a few notes about the device itself, setting up. We do not expect someone to immediately become an expert, so we share tips on the main things, such as screenshot, gestures and other useful functions, such as a digital well. We also have online management with a large number of videos and lessons on how to use the new Android phone, and the reference center is always a good source for checking. Finally, we also share each quarter of the latest Android updates - as soon as you get your phone, you will receive them on your device, but you can also get them by e-mail. By e-mail or view our blog or social sites. Do you want to switch with the iPhone to Android? Congratulations! Nothing is as interesting as going into new and potentially more green pastures, and moving from this to Android is almost as difficult as you think. In this leadership, we will show you how to do it. Although the best manufacturer of the iPhone Apple has strong and loyal fans of their devices, the best Android phones are also not careless. For beginners, Android phones are of different price ranges, and many models are much cheaper than iPhone, which makes them very attractive for those who have a budget. They also have more options for size, design and functions, and most offer an expanded storage, various controls that you can place on the main screen, and more options for musical services. Of course, sometimes it works the other way around, and people are looking for ways to switch with Android to the iPhone, but people who are moving from iOS to Android are rarely disappointed. After you have found one of the best telephone offers and select a new Android phone, you need to transfer applications, contacts, photos and files from iOS to Android. If you had an iPhone for some time, you are probably quite included in the Apple ecosystem. Many applications for mobile applications are based on clouds and are compatible in two ways, so you can use them for Android without interference. However, in other cases, you must actively transfer data. But do not be afraid. Switching with iPhone to Android and setting up on the Android phone is not as difficult as you think. Yes, to make sure that the process is going smoothly, it requires some preparation, and this can be a good idea. First, you can wait for special instructions for your device during installation. We do not expect anyone to be an expert immediately, so we will add tips on basic information such as screen purchase, how to use movements and how other useful features such as Digital Well will be used. In addition, we have an online wizard with many videos and training on how to use a new Android phone, and the help center is always a good source of advice. Finally, we also share the last three-month Android update, you will have a phone, you will get them to your device, but you can also buy them by e-mail or view them on our blog or social sites. Do you want to switch from iPhone to Android? Congratulations! There is nothing more exciting than going to a new and potentially lush meadow, and the transition from iOS to Android is not as difficult as you think. In this guide, we will show you what to do. Although the best iPhone manufacturer Apple has a strong and loyal fan base for its devices, the best Android phones are not lazy. For beginners, Android phones are offered at a very high price, and many models are much cheaper than iPhone phones, which makes them attractive for us who have a limited budget. In addition, you have more ways to choose size, design and features, as well as expandable storage, various widgets you can place on your home screen, and more music options. In fact, sometimes the opposite is, and people investigate how to switch from Android to iPhone, but those who move from iOS to Android are rarely disappointed. When you find one of the best mobile phones and buy a new Android phone, you will have to send your applications, contacts, photos and files from iOS to Android. If you have an iPhone. You may be quite immersed in the Apple ecosystem. Many mobile applications are cloud-based and double device compatible, so you can start using Android smoothly; However, in other cases, you will have to actively send data. But don't worry. It is not as difficult as you think you can switch from iPhone to Android and learn how to install an Android phone. Yes, you need some preparation to process smoothly and it may be a good idea to give your way out. Before spring rolls around, your new Android phone is no longer cluttered with things you don't need. We've put together a simple nine-step guide to get your iPhone as smooth as possible and make sure your files are translation-ready. Book details Google Drive/Mage 1 inch (CREDIT: Apple) (Image credit: Apple) Before you switch to Android with your iPhone and deal with something, give your phone a little spring. Why do you post things you don't? I don't want those unsolicited photos or videos or contact information for people you don't use to 'tell'? Roll. Just install the app, enter your Google account (or create a new account if you don't already have one), and then go to Settings > Backup. If you don't want to back up data like Calendar, you can install this option here. Start with the Photos section, as there are two options: If you want to upload photos in their original quality, Google Drive relies on your storage limit. If you choose high quality instead, the quality will be lower (yes, confused), but the difference is unlikely to be noticeable and these photos will be unlimited. You can't back up iCLOUD documents using this method, you'll be better off downloading those documents to your computer and installing them manually to Google Drive. Back up or transfer your photos (Image credit: Future) By switching to iPhone for Android and activating your new Android phone, you'll be able to sync with your old iPhone over Wi-Fi or Cable. At this point, you can manually transfer all your iPhone photos (and other files) to your new phone. If you have a Gigabyte photo, it may take some time for the app and take you away from playing with your new phone. Fortunately, there are various ways to speed up this process, one of which is the ability to back up to Google Drive. If you currently back up your photos in iCloud, the release of the iPhone may remove all of your photos. The good news is that Apple iCloud photos can now be transferred to your Google Photos account, so we recommend transferring them. Google Photos, the new Android Photos, and AI tools are very likely to save. And photographs are very useful. Even if you are not using iCloud, you should consider downloading Google Pro iOS photos and create photos directly before transferring additional data. You can also speed up this process by learning to delete all photos from your iPhone. Before you keep them, keep only those you really want to keep. (Image credit: Apple) If you don't do this via Google, you can export your contacts manually from your computer. If you use iCloud synchronization for your data and you almost certainly do it because it is on the default settings, you can go to iCloud.com (opens on a new card) and export data from here. You can find your contacts in the "Contacts" section and look for a gear icon in the lower left corner of the screen. Click on it, select everything, then click on it and select Export -vcard. This downloads the VCARD file to your computer. Now go to Contacts.google.com (open on the new card) and join. Check out the bottom left of the screen to see the import link. Click on it and select the VCARD file you have just downloaded. If you have not cleaned your contacts before export, you can repair duplicates by clicking on yourself and fixing them. This undertakes Google to analyze your contacts and search for the latest duplicates and contact information. You can also export a subset of contacts: Use the search box to find the contacts you want to export, and then click Settings> Select everything> Export to VCARD.4. Move to start broadcasting. Subscribe to Apple Music and select iTunes Match. Apple downloads a list of songs you have and then lets them download them to your devices, including your new Android phone. You can also download Apple Music from Mac/Windows. Music Library YouTube (opens on a new card). Join your Google Account in this link and you can easily drag your Apple Music/iTunes .m4A files. They will be downloaded from your account and then you can listen to them via the YouTube music app. Note that just like Apple Music you have to subscribe to YT Music to easily listen to your library. If you are planning to transfer your Set up playlists or Apple Music (opens in new tab) music in a new streaming program like Soundiiz (opens in new tab) (opens in new tab). If you want to keep your local music files on Android, "Wait until you completely save your phone. We recommend that you download a third program for local music files, then connect the phone to the computer and transfer files manually the best option, the best paid option, support most files and Strong PowerAmp, which is a particularly popular music program with EQ settings (opens in a new tab). Try the reader's music (open in a new tab) to get a simple and free and free Option. You might want to check out the best music and podcast apps for Android. Phone from a new phone. It is more likely to have a USB-C adapter attached to the USB. If you're not P, you can connect two devices over a general Wi-Fi network. Therefore, you can choose which data you want to transfer from iOS to Android. We hope you have confirmed most of your data so this will take too long. However, this is convenient because your Android phone can detect all apps transferred to Android iOS, so it offers all Android apps to draw apps. Log in to your account and download the backup program (Video Loan: Google). iOS has Apple Arcade, Android has Google Play Pass. If you've decided to import your iOS programs on Android, you should compare the list of apps on both phones to make sure they've all been transferred correctly. Otherwise, you need to go to the Google Play Store and start looking for changes. Some iOS programs will not be transferred automatically according to the paid ones. In most cases, a program you purchased in IOSA game you paid \$4.99 for on the IOS App Store costs an additional \$4.99 if you want to play it on Android. Otherwise, some apps may be specific to iOS only. In that case, you may need to find an equivalent app to replace it. We've organized the best Android apps by photography, design, education, entertainment, fitness, music, productivity, adaptation, and weather. (Photo credit: Apple) If you're using Chrome on iOS to sync with Chrome on your desktop, you don't need to worry about this step. However, if you use the standard Safari browser on your iOS device, you need to export your bookmarks. Safari syncs with the desktop version, so go in and select file > export bookmarks. You can then import them to your Chrome desktop that is synced with Chrome on your Android device. It's important to note that saved passwords and automatic entries are not exported, so make a note of any passwords you need to save. Always make sure you've found my phone and erased all your data before selling or passing on your iPhone or iPad. Draw iMessage (Photo credit: Apple) If you change the SIM card and phone number on an Android phone without turning off iMessage, the new phone may have problems receiving text messages from other iPhones. The number belongs to the iPhone, so texts sent from iMessage can only be read in iMessage a, which is not available for Android. If you follow our instructions, you should still have your iPhone. Go to your phone settings and scroll down to find both "messages" and "facetime". Change the delete both option in both submenus. This will protect your future phone from Apple's weird confusion. If you have already deleted or replaced it on your phone, don't worry. Go to the Apple iMessage page (open in a new tab) and enter your phone number at the bottom of the page. You will receive a 6-digit confirmation code; Submit and Apple will do something in the backend to restore your new iPhone from the day. Find My iPhone and then delete all your data if you transfer it because you're selling or donating your device. It is therefore very important to do two things: find my phone and learn how to reset iPhone. Unless Then the next owner will not be able to use the device. If you don't do the second, it can lead to a confidentiality disaster. We cannot emphasize this: Do not wash the data from the phone until you are sure that the new device has everything you need. Removing an iPhone or iPad cannot be returned, so it is always reasonable to check everything first. Now click "Search" and set the "my phone" value "DISPLAATE". Return to the "Settings" main menu, slide it down and click "Reset". Now click all content and settings. Good Android! Android!
