## Technology in Education

In our lives today we expect technology to make a difference, and particularly in furthering our education. We see technologies effects as beneficial. We look for it to change, and improve, what has come before it. Technology is the set of means without which certain kinds of constructive activity would be almost impossible. It supports our efforts to appeal to different learning styles which give us a way to interact with each other and extend the learning experiences. It is a good way to extend the essential skills and knowledge of students. By integrating [technology](#) into our educational programs it provides students with additional tools to enhance their learning. Technology allows us to demonstrate teaching strategies and also provide teachers with skills to succeed in the classroom. It changes the structure and the manor in which we learn. Such technologies used in [education](#) from the past, present and beyond are the typewriter, computer games, internet, and communication.

The relationship between technology and education can be characterized as a process of change and innovation. In the beginning societies depended on oral communication then the written language was developed. Making an alphabet made learning to read and write

much easier than in the past. As technologies of written language became prevalent and more people became literate social structures formed. The next big step towards a better education was the industrial revolution. The technology that occurred during the revolution created a need for workers in the newly created [factories](#) shifting learning to prepare kids to work in such factories. Technologies such as the typewriter and printing press made it easier to make documents i...
