How do i reduce the size of a picture for email on android. How to reduce picture mb size on android. How do i reduce picture size on android. How do i reduce the mb size of a picture on my android. Reduce picture size on android phone.

Picture-in-Picture (PiP) is a feature available on Android smartphones running Android 8.0 Oreo and later. It allows you to multitask. For instance, you can search for a restaurant while video chatting with a friend or watch a funny video on a website while getting directions on Google Maps. PiP is a nice feature for heavy multitaskers who jump from app to app. Make sure your Android apps are up to date, then: Open Settings. Tap Apps & notifications. Go to Advanced > Special app access. Select Picture-in-picture. Choose an app from the list. Tap the Allow picture-in-picture toggle to enable PiP. Since this is an Android feature, many of Google's top apps support picture-in-picture, including Chrome, YouTube, and Google Maps. However, YouTube's PiP mode requires a subscription to YouTube Premium, its ad-free paid subscription platform. PiP mode also works with YouTube TV, the company's streaming TV service. Other compatible apps include: VLC Netflix WhatsApp Facebook Instagram Pocket Casts Hulu How you launch picture-in-picture depends on the app: In Google Chrome, go to a site to start playing a video in full screen, then tap Home on your Android. With some apps such as VLC, you have to enable the feature in the app settings first. On WhatsApp, when you're in a video call, tap the preview of the video to activate PiP. When you've figured out how to launch PiP in your favorite app, you'll see a window with your video or other content in the lower-right of your display. Tap the window to access the controls. In some cases, you'll see Play, Fast Forward, Rewind, and Maximize/Full screen that brings you back to the app in full screen. For playlists, tap the Fast-Forward icon to move to the next song in the list. Some videos have only Exit and Full-screen icons. You can drag the window anywhere on the screen and pull it to the bottom of the screen to exit the window. Some apps have a headphone icon that you can tap to play audio in the background without visual videos. FAQ How do I send a picture in a text message on Android? To send pictures via text on an Android device, open the Photos app, tap and hold the picture you want to text, tap Share > Messages. In the Messages app, tap the plus (+) sign to open attachment options, then tap the Photos icon to browse and select photos to text. How do I hide pictures on an Android phone? To hide photos on an Android phone, open Google Photos, select the pictures you want to hide, tap Menu (three vertical dots), and select Move to Archive. Alternatively, your Android model may include a "secure folder," or you can use a third-party app to hide pictures. How do I recover deleted pictures on Android? Thanks for letting us know! Get the Latest Tech News Delivered Every Day Subscribe Tell us why! No matter what screen resolution your device has, the default text is fairly large and sharp. However, you may wish that you could make the font just a little larger or, conversely, you can shrink it down to fit more on the screen. In Android 5.0, Google provides two methods for changing the text size. Here's how to find them. MORE: Android 5 Lollipop: A Guide to the Best New Features Option 11. Open Settings. 2. Tap Display. 3. Tap Font Size. 4. Choose from one of four sizes: small, normal, large and huge. Note: This option will change the font size for every account on the device. Option 21. Tap Accessibility in Settings. 2. Tap the check box next to Large text. Check our Android Forums for even more information about Google's mobile OS or talk chat with fellow Tom's Guide readers. Sam Rutherford is a Staff Writer at Tom's Guide. Follow him @SamRutherford on Twitter, and Tom's Guide on Twitter, Facebook and Google+. By Ashley Poland | Justin Sullivan/Getty Images News/Getty Images Apple puts a lot of emphasis on the quality of the iPhone's camera. While photos come out crisp and clear, they can also be quite large, which can cause a problem when you're sending or uploading photos. Emailing photos in iOS allows you to resize photos automatically, but you can also use other tools to changing your photo file size. The actual iPhone photo size will vary depending on which camera you used to take the photo. The 8-megapixel iSight camera on the back of the iPhone creates photos that measure 3264 by 2448 pixels. If you're using the FaceTime camera on the front of the iPhone, the camera produces 1280 by 960 pixel photos. These photos can range anywhere from 1.5MB to 4MB in size, more if you're using the iPhone's HDR feature. These large photos can use significant chunks of your data plan – especially if you email several pictures at once. When you attach a photo to an email on an iPhone, it asks if you want to resize the image to send in the email. You have four options: small, medium, large, and actual size. The small image will produce an image 320 by 240 pixels. Medium is 640 by 480 pixels. Large pictures sent this way will be 1632 by 2448 pixels. If you want to resize photos outside of the email application, you can download an app that allows you to resize your photos. This provides some flexibility in the size, as opposed to the automatic standards set by iOS. The Simple Resize app allows you to manage one photo, while Reduce allows you to resize photos in batches. Adobe Photoshop Express allows you to make several significant changes to your iOS photos. If you intend to print out photos, then you want to keep them at the largest resolution possible to make sure that the printed photos aren't pixelated. For a photo sharing site, large sizes are fine, but you ought not need anything bigger than 1000 pixels. Photo albums on Facebook go a bit smaller: images aren't displayed any larger than 960 by 720 pixels, and are even smaller in other places on the news feed. If you're just texting a photo to friends for fun, a small photo will suffice. By Jen Cordwainer | Creatas Images/Creatas/Getty Images The default software keyboard that appears on Android screens can be difficult to navigate, especially if you have eyesight issues, large hands or mobility challenges. Although Android does not have a native feature to magnify the keyboard, several third-party apps can help you make the keyboard larger, such as Big Buttons Keyboard Standard, Big Keyboard and ThickButtons. Download and install the free Big Buttons Keyboard Standard app from Google Play (link in Resources). Launch the app, tap "Language and Input," check off the application name, and then press "Back." This gives the app permission to be used as an input source. Tap "Select Input Method," check off the application name once again and tap "Back." Download and install the free Big Keyboard app, which can be found in Google Play (link in Resources). Launch your Android Settings menu and tap "Language and Input." Select "Big Keyboard." Your Android prompts you with a security warning regarding keyloggers. However, these keyboard magnifiers are not malware, so press "OK." Scroll up and tap "Input Method." Check off "Big Keyboard." Download and install the ThickButtons app from Google Play (link in Resources). Open your Android "Settings Menu" and choose "Language and Input." Check off "ThickButtons" and press "OK." Click on "Input Method" and select "ThickButtons." Add more tension (not pictured). Remove the paperclips that are stopping the winding pegs. Rotate the winding pegs evenly to slowly increase the tension. The bundled dental floss is extremely strong, so don't be afraid to really crank it up (the winding pegs will break before the floss does!) Make sure to rotate the top and bottom winding pegs evenly, and that the tension is even for both throwing arms. If one arm is more powerful than the other, your shot won't be accurate. You may need to make small adjustments to the amount of tension in each torsion bundle to make them even. Load and fire! Insert the bolt through the front of the ballista, and position the nock onto the string. With your other hand, hold the back of the bolt in place. This frees your first hand to switch positions (picture 1). Pinch the bolt near the fins, and open the trigger (picture 2). Avoid having your hands (or anything else!) in front of the ballista as you're loading it in case of a misfire. Push the bolt into the trigger (picture 3). Center the bolt, aim, and simply press the trigger to fire (picture 4). Digital presentations get pretty sizable after you fill them with multimedia files, which may become a problem if you intend to send the file as an email attachment. Luckily, you can reduce the file size of an Apple Keynote slide deck in a few simple steps. Before you make this move, make sure images and any other embedded content is placed where you want it, because Keynote saves space by lowering resolutions to fit existing parameters. How much space you'll save depends on how large the images you originally embed, so results will likely vary. Here's how to reduce the file size of a Keynote presentation. 1. Click File. 2. Select Advanced. 3. Select Reduce File Size. 4. Click Reduce. You've reduced the file size of a Keynote presentation. (Image credit: Laptop Mag) Mobile phones these days have some great camera technology. As image resolution continues to improve as phone cameras increase megapixel sizes, image size follows suit. This leads to snapping a lot of images without much thought that take up ever-increasing amounts of our device and cloud storage. MacBook Air vs. MacBook Pro: Which is best? macOS Big Sur review To combat this, you can always reduce the size of your photos. At first glance, this doesn't seem to be an appealing option. Why would anyone take a photo in high quality and then make it worse? Well, you should ask yourself how many photos you're printing these days as opposed to using solely on social media. If most of your photos are for Facebook, Instagram, or Snapchat, you really don't need the extra resolution – especially considering these social networks reduce the sizes of your images anyway to save on storage costs. For print, we'd want a high quality image at 300 PPI. For social media, 72 PPI is often more than enough. Weigh the pros and cons, and if you can live with a decreased image size, here's how to shrink them using built-in tools on your Mac. (Image credit: Laptop Mag) 1) Right-click on the image you want to reduce the size for. (Image credit: Laptop Mag) 2) In the menu that opens, click Open with. (Image credit: Laptop Mag) 3) Select Preview, to open the image in Preview. (Image credit: Laptop Mag) 4) In Preview, open the Tools menu. (Image credit: Laptop Mag) 5) In the Tools menu, click Adjust Size. (Image credit: Laptop Mag) 6) In the dialogue box that opens, change the resolution. (Image credit: Laptop Mag) 7) Click OK to confirm the changes.
