Except for the knight, which may jump over pieces, pieces cannot move through pieces of either colour without either stopping (in the same of a piece of the same colour) or capturing them (in the case of a piece of the opposite colour). The different chess pieces, from left to right: pawn, rook, knight, bishop, queen, king. Each chess piece moves in a specific way, and must be moved according to its legal movement. Pieces cannot be placed on the same square as a piece of the same colour. Players cannot choose to skip a turn - they must move a piece. Chess can end as the result of checkmate, resignation, a draw or - in tournament settings - a player running out of time. Advanced chess rules There are a number of advanced rules that can be used in chess, along with specific openings and board positions known by a variety of names. From the Double King's Pawn Opening to the famous King's Gambit and Queen's Gambit. These movements must be made in a single straight line during a single turn. The closer rank is nearly symmetrical, with rooks (also known as castles) placed on the two leftmost and rightmost corner squares, followed by knights on the inside space next to them, then bishops. Image: Steve Buissonne/Pixabay How to promote a pawn If a pawn reaches the opposite edge of the board - the farthest row (rank) from the controlling player - it is promoted to another piece: a rook, knight, bishop or queen. While most casual players use captured pieces to represent promoted pieces, a pawn can legally be promoted to any piece regardless of whether it has been captured. Chess is possibly the most recognized tabletop game - ever. En passant occurs when a pawn moves two squares forward as the result of its optional starting move. King The king moves a single space horizontally, vertically or diagonally. En passant - French for çAAÀin passingeAAÀ It is one of the most famous moves in chess. This guide includes all the basics you need to know when learning to play chess, from the square on which to place the queen during setup to when to call "checkmate" and claim victory. Image: Angela Bed144rftig/Pixabay What is check and checkmate? Check and checkmate: circle your opponent's king to win. They cannot move horizontally, diagonally or backwards. The second row, from the player's point of view, consists of a line of eight pieces, each placed on a single square. It captures the pieces as usual by landing on a space occupied by a piece of opposite color and cannot move on a square occupied by a piece of the same color, but can move on pieces of both colors while moving. Who knows, maybe this could be the first step on your way to becoming the next Grand Master. What's going on, by the way? For example, a player may have multiple queens as a result of pedestrian promotion, or multiple banners able to move along diagonal lines of the same color depending on the square in which the pedestrian was promoted. Bishop The Bishop can move diagonally any number of squares, i.e. it always moves along the diagonal line of squares corresponding to the current color of its square. If you play with an optional timer, as in tournaments, the first player to run out of time loses the game. If the opponent's pedestrian would have been able to legally capture the moving pedestrian if he had moved only one square instead of two, the opponent can declare en passant to his next turn and move the pedestrian diagonally over the square crossed by the pedestrian à capturing the pedestrian as if he had moved only one square.
